

CANTEMO

JAVASCRIPT DEVELOPER

OPEN POSITION

At Cantemo, we are a small team of creative developers who are passionate about building great solutions and solving complex problems for our amazing clients. Whether this is at our desks using the latest technologies and operations methodologies or hashing them out whilst taking a coffee break, or over a game of FIFA or Assassin's Creed; we feel that creating a relaxed and fun environment results in creating an environment which produces exceptional work and great experiences.

If you aren't excited about technology, this job probably isn't for you, but if you enjoy:

- : The challenge of solving very complex problems and subsequently delivering amazing products,
- : The satisfaction that comes with turning out a product that is used immediately by enterprise customers around the world, including some of the best-known brands and Fortune 500 companies,
- : Being part of cutting edge video solutions for some of the top organizations in their respective industries.

In short, if you share our passion, and want to combine it with having fun, then read on!

WHAT YOU WILL BE DOING

As our team is small, flexible, but highly focused, your day-to-day activities will also be varied. They would however mainly consist of:

- : Designing and building features for our flagship product Cantemo Portal using JavaScript, HTML, CSS, and modern libraries and frameworks (no IE8 here).
- : Communicating with a talented team of backend engineers the needs for front-end application.
- : Defining and implementing libraries, frameworks, and systems, and the testing infrastructure supporting them.
- : Developing our HTML5 based video editor and annotation tools.

THE BORING BIT

We are looking for someone with relevant experience, either with a bachelor's degree in a relevant field or some pretty impressive work experience credentials. We believe that a GitHub repo that blows us away is usually more exciting than impressive grades. You will have experience delivering rich applications using web technologies and excellent knowledge of JavaScript debugging and performance tools.

You will also need a thorough understanding of modern JavaScript framework (React.js / Flux / Backbone.js / ES6 / webpack), and strong experience with REST APIs, JSON, HTTP, and DOM manipulation.

If you can do all of that and demonstrate analytical and advanced troubleshooting skills and qualities, this may just be for you! We also need someone who will take pride in craftsmanship of their code and turn out a product with a good User Experience.

NOW IT GETS INTERESTING

We have around 100 customers worldwide that use our product. Some of them you may not have heard of, but there are quite a few we know you will have done, such as The Guardian, ITV, Nike, Boston Red Sox, Unicef, and many more. As they are continuously fed with new software releases, the chances are you will get to work with some big names.

Our customers are in every continent of the world, even Antarctica! This means that it is truly a multi-lingual and multi-cultural environment. It also means that as well as working with an ambitious, but easy-going international team, you may also get to travel to some far-flung places and meet some interesting people in the process.

OUR ETHOS

At Cantemo, we place a great deal of importance on our team. The work environment is collaborative and transparent (no really – we mean it!). We have a flat hierarchy and we allow people that work with us to focus on doing the things they enjoy and do best.

Essentially, our vision is based on the idea that autonomy, in combination with freedom and responsibility, breed innovation. We believe that when talented people work in a flexible and positively challenging environment in the midst of having fun, that's when the magic happens.
